

RUDRAKSH BHANDARI

San Diego, CA 92093

rudrakshbhandari99@gmail.com | 858-241-5942 | [LinkedIn](#) | [GitHub](#) | [rudrakshbhandari.com](#)

Education

University of California San Diego

Bachelor of Science in Computer Science | GPA: **3.9**

San Diego, CA

September 2024 – March 2027

Experience

Amazon Web Services - EC2 Gateway Networking

Santa Clara, CA

Software Development Engineer Intern

June 2026 – Present

- Built a gameday testing framework for a distributed host-health system that converts **3 historical customer-impacting incidents**, including multi-zone failures, into repeatable regression tests using controlled fault injection.
- Designed a guardrailed Python/Bedrock AI agent that executes one-command gameday replays, orchestrating cross-service fault injection, state mutations, evidence collection, and recovery with deterministic safety checks in **under 10 minutes**.

Software Development Engineer Intern

June 2025 – September 2025

- Built a React/TypeScript CLI command generator for on-call incident response, cutting manual engineer effort by **75%** and reducing command-generation latency from **2+ minutes to <30 seconds**.
- Engineered a Java/Python AWS event service for patch visibility across EC2 cluster groups using Lambda, SSM, SQS, SNS.

Outfitr

San Diego, CA

Co-founder & Lead Developer

April 2026 – Present

- Launched a social fashion app that helps Gen Z decide what to wear from clothes they already own, with closet import, outfit recommendations, and friend polls; **Y Combinator** Summer '26 application ranked in the **top 10% of applicants**.
- Architected Outfitr's multimodal wardrobe-extraction pipeline: an asynchronous VLM-based system that processed **226 real-customer photos across 97 production jobs**, identifying 1,365 garment candidates and adding 279 garments to users' closets with **zero job-level failures**.

NomNom

San Diego, CA

Co-founder & Lead Developer

September 2025 – March 2026

- Built and launched a two-sided campus delivery marketplace on the App Store, developing React Native apps for students and couriers with Stripe payments, real-time courier tracking, live ETAs, push notifications, and in-app chat.

Triton Software Engineering

San Diego, CA

Software Developer

November 2024 – June 2026

- Built full-stack features for [David Brower Center](#)'s website, a database platform for nonprofit organizations to visualize relationships between NPOs, using TypeScript, React, Node.js, Prisma, and Postgres.

ShareAllBooks

United Arab Emirates

Founder

August 2023 – September 2024

- Built and launched a React Native book-sharing app on App Store & Play Store, **reaching 2,000+ downloads and 1,500+ donations/sales** within months; featured in [UAE national press](#); peaked at **#41 in App Store's Top Charts** for Books.

Technical Skills

Languages: Java, Python, JavaScript, TypeScript, C++

Frameworks: React Native, React, Next.js, Node, Express

Databases: PostgreSQL, MongoDB, Firestore, MySQL

Tools: Git, AWS, Xcode, Stripe, Expo

Projects & Research

NyaayWatch

April 2026 – Present

- Built an open-source civic data platform with **5,000+ monthly visitors**, automated Indian court data ingestion, PostgreSQL/S3 evidence storage, versioned snapshots, public APIs, and rollbackable AWS/Cloudflare publishing.

Undergraduate Research

March 2026 – Present

- Developing a unified model for generation, embeddings, and agentic routing in the Statistical Visual Computing Lab ([SVCL](#)) under Prof. Vasconcelos, using LoRA-based embedding distillation and generation replay to improve retrieval.
- Benchmarking dense prefill vs. KVCOMM TTFT on H100s across multi-agent workloads in the Alternative Computing Technologies ([ACT](#)) Lab under Prof. Esmailzadeh to evaluate KV-cache reuse.
